welcome

presented by: B.Charulatha

code:

```html
<form>
<label>Name:</label>
<input type="text" name="name"><br>
<label>Email:</label>
<input type="email" name="email"><br>
<label>Password:</label>
<input type="password" name="password"><br>
<label>Confirm Password:</label>
<input type="password" name="confirm_password"><br>
<input type="submit" value="Register">
</form>
```

1. `<form>`: This is the start of the form element, which contains all the input fields.

2. `<label>Name:</label>`: This is a label for the input field, describing what the field is for.

3. `<input type="text" name="name"><br>`: This is a text input field where users can enter their name. The `name` attribute is used to identify the field in the backend.

4. `<label>Email: </label>`: Label for the email input field.

5. `<input type="email" name="email"><br>`: Email input field. The `type="email"` helps with basic email validation in modern browsers.

6. `<label>Password:</label>`: Label for the password input field.

7. `<input type="password" name="password"><br>`: Password input field. The `type="password"` masks the input for security

8. `<label>Confirm Password: </label>`: Label for confirming the password.

9. `<input type="password" name="confirm_password"> <br>`: Another password input field for confirmation.

10. `<input type="submit" value="Register">`: The submit button to send the form data.

11. `</form>`: Closes the form element.

Thank you !!
